EDUCATION

Boston University

Master of Science, Robotics and Autonomous Systems. College of Engineering Graduate Scholarship. GPA: 3.4/4.0.

Relevant Coursework: Software Engineering, Engineering Dynamics, Circuits

St. Lawrence University

Bachelor of Arts, Major in Anthropology, Minor in Biology. Cum Laude. GPA: 3.4/4.00.

Boston, MA

Expected May 2028

Canton, NY

May 2023

EXPERIENCE

Project Engineer Intern

Martin Electric

Feb 2025 – July 2025

Rensselaer, NY

- Diagnosed, troubleshoot, repaired, and operated a plasma CNC machine to support manufacturing and fabrication processes.
- Designed a junction box in Autodesk Fusion and generated a Bill of Materials to address space organizational requirements for the electrical field team.
- Designed a storage rack for electrical transformers in Autodesk Fusion, collaborating with the project manager and fabrication specialist to select materials and optimize the design for manufacturability and function.

Engineering Intern

The Warbird Factory

March 2024 – Feb 2025

Latham, NY

- Integrated STM microcontroller boards into medical equipment hardware, performing chip removal, soldering, and serial encoder implementation to retrofit legacy systems.
- Designed a CAD bracket tray enabling efficient integration of 3 STM boards within a constrained space.
- Coordinated with third-party software developers to integrate updated code into existing hardware.
- Developed simplified design solutions for EV charging stations, reducing part count and complexity to improve ease of manufacturing and assembly while cutting material costs by 33%.
- Performed precision machining alongside mechanics to repair and fabricate custom parts for WWII aircraft, ensuring strict adherence to technical specifications.
- Supported upgrades to vintage aircraft to comply with current FAA regulations, balancing modern safety standards with preservation of historical integrity.

Archaeological Field Technician

Hartgen Archeology

Aug 2023 – March 2024

Rensselaer, NY

- Coordinated with the public and construction teams to complete archaeological excavations on deadline, minimizing project disruptions while recovering artifacts with precision.

PROJECTS

ARCTOS Robotic Arm

- Built a 6-axis robotic arm based on the open-source ARCTOS project, applying hands-on mechanical assembly, electronics integration, and embedded systems knowledge.

ACTIVITIES & LEADERSHIP

BU Robotics Club

Vice President

2025 - Present

- Founding officer of a newly established student robotics organization at Boston University.
- Established and led a workshop centered on a laser cut 4-axis mechanical arm with positional servos, controllable via a servo testing board for manual operation and an Arduino for programmed control, teaching new club members core robotics skills in mechanical assembly and embedded systems.

AWARDS & HONORS

- Eagle Scout, Boy Scouts of America (2019)
- Lambda Alpha, Anthropology Honors Society (2023)

SKILLS

Electronics and Embedded Systems: Arduino, Raspberry Pi, STM boards, Soldering, Servo/Stepper Motors

Programming: Python, C++

CAD Software: Autodesk Fusion 360, AutoCAD, SolidWorks, OnShape

Prototyping and Manufacturing: 3D printing, Laser cutting, Plasma cutting, CNC mill, Drill press, Manual lathe

Cloud and Version Control: GitHub
